

# FURBIES AND WHERE TO FIND THEM

Found in dark corners and forgotten closets, Furbies come in many forms. These are some of the ones we know of.

## 1989 Furby

The first furbies to ever be seen. These magnificent creatures come in various colors, either having a tail or a mane. All furbies speak Furbish, but are known to pick up other languages!

## Furby of the Long Variety

Furbies that have been modified to have longer torsos. There has been an increased number of sightings recently.

## Emoto-Tronic

The emoto-tronic furbies were first seen in 2005. They are almost double the size of the common furby and don't have a tail. These creatures are said to be fond of singing and playing games like green light red light.

## Buddy

The buddy is a smaller furby that doesn't have an inner skeleton. They are still capable of speech, but can't move any body parts (not that we've noticed, at least).

Furby Fact #1: Furbies are similar to angels. They are not divided into male or female—they embody the best of both. Some people theorize that you can answer this question by the pitch of the voice, but we like the angel theory more!

## Forb

Furbies that have been combined into one round being. It is unclear whether they retain complete sentience or share one brain.

## Spideroo

Similar to loaves, except they have been given skeletal spider legs. If you see one lurking at night, don't run. Back away veeery slowly.

## Loaf

Loaves are calm creatures, usually found lounging around. On average, they are larger than most Furbies. The largest loaf ever sighted was the size of a truck, but they soon returned to the wild.

## Double Trouble

What. What is this. I genuinely don't know and at this point I'm too afraid to ask.
